What's your water problem?

Problem #1: Hard Water

Most of the water in the Cincinnati area is between 12 and 25 grains per gallon, which is considered "extremely hard" by the Water Quality Association. This means that the average family of four living in the Greater Cincinnati area will have more than 15 pounds of rock in the water running throughout their home per month!

Hard water may not seem like a big deal. However, the minerals in hard water build up over time and will cause problems with plumbing and water using appliances.

Plumbing

Scale build-up can clog pipes, reducing water flow leading to pipe replacement.

Dishwasher

Leaves spotting and film on dishes.

Requires additional detergent to get dishes clean.

Lifespan of dishwasher is reduced by 30% requiring replacement more frequently than normal.

Water Heater

Heated hard water forms a scale of mineral deposits that reduces the efficiency of the water heater.

Scale build-up can lead to costly repairs or replacement of unit. It reduces lifespan of water heater by 30%.

Fixtures and Faucets

Scale build-up can reduce the flow of water.

May require replacement of fixtures more frequently than normal.

Solution: Kinetico Water Softener Systems

You're sure to notice the difference that clean, soft water throughout your home makes. A Kinetico Water Softener will extend the life of your pipes and appliances and improve the efficiency of water heaters. It will also provide you with better lather, more efficient use of soaps and detergents and softer skin and shinier hair. Your laundry comes out brighter, and you never have to worry about battling soap scum again.

Kinetico Water Softener Systems are customized to meet your individual needs based on the quality of your water and offer fast, powerful and efficient performance.

Benefits of Kinetico Water Softener Systems

High Flow Rates

Kinetico Water Softeners provide you with a good supply of clean, soft water, so wash your laundry, shower, plus you can run the dishwasher, all at the same time.

Large Porting Size

Perfectly suited for larger plumbing found in many homes. Up to 1 1/2 inch.

Greater Efficiency

Kinetico systems are even more environmentally friendly - up to 75% more salt efficient than competitor's models.

Non-Electric

There's nothing to plug in, no timers to set or adjustments to make. There won't be an increase in your electric bill.

Demand Operation

Kinetico systems operate only when they need to, saving you water, salt or potassium, time and money.

Twin Tank Design

Soft water is available 24 hours a day, every day. Service keeps switching from tank to tank, so one tank will always be ready to soften your water, no matter how much water you use in a day. Your system will be able to clean itself with clean, soft water too, keeping it operating at full capacity.

Outstanding Warranty

Compare Kinetico's warranty with other water treatment products; you won't find a more solid warranty in the industry.

Problem #2: Water Contaminants

If your water smells bad or tastes funny these may be signs of impurities in your water. The simple fact is we can no longer take the quality of our drinking water for granted. Private well water can be affected by any number of contaminating factors, while municipally treated water that meets federal guidelines has been found to contain bacteria, viruses and protozoa, along with a host of other contaminants.

Solution: The Kinetico K5 Drinking Water System

A reverse osmosis system can filter your drinking water eliminating tastes and odors.

Certified to remove more contaminants than any other Reverse Osmosis System.

Is customizable to your home's specific water filtration needs.

It's expandable as your water filtration needs change over time.

"We stand behind our work because our name is on it"
